E D U C A T I O N

Bachelor Of Computer Application
At MAMUniversity | 2026
CGPA : 8.2 / 10

S K I L L S

- Languages
PHP, Java, C, C++, JavaScript, C#
- Frontend
HTML5, CSS3, React, React Native
- Backend & Database
.NET (ASP.NET)SQL, MySQL, phpMyAdmin, JDBC, Database Design, WAMP/XAMPP
- APIs & Data
AJAX, JSON, Postman
- DevOps & Version Control
Git, GitHub, Jenkins
- Concepts
Object-Oriented Programming(OOP)
Software Development
- Soft Skills
Technical Support
Team Leadership

C E R T I F I C A T I O N S

- HackerRank Certifications
- Software Engineer (Role Certified)
 - Problem Solving (Intermediate)
 - SQL (Advanced & Basic)
 - CSS (Basic) & Python (Basic)

KISHAN MARWADI

FULL-STACK DEVELOPER

S U M M A R Y

BCA graduate with hands-on experience in full-stack web development and relational database design. Proven ability to build production-grade, real-world applications from scratch, demonstrated by the development of "Samaaroh," a comprehensive wedding planning platform. Passionate about writing clean, secure code and solving real-world business problems through technology.

E X P E R I E N C E

Dec 2025 - Mar 2026

Full-Stack Developer | (In-House BCA Capstone Project)

- Architected a full-stack wedding planning platform using PHP, MySQL, and Tailwind CSS.
- Engineered a 12-hour booking workflow and 30% advance payment date-locking system.
- Designed a normalized database with Role-Based Access Control (RBAC) for 3 user types.
- Implemented secure authentication (bcrypt) and offline-safe UI for local deployment.

P R O J E C T S

Samaaroh | Full-Stack Wedding Planning Platform

(Final Year BCA Project)

- Architected a hyperlocal B2C wedding platform with a normalized 6-table relational database and strict foreign key constraints.
- Engineered a 12-hour booking acceptance workflow and 30% advance date-locking system to prevent vendor ghosting and scams.
- Implemented Role-Based Access Control (RBAC), bcrypt password hashing, and secure session management to prevent SQL injection/XSS.
- Built a secure admin panel with cryptographically secure token-based invitations for multi-role user management.

Tech Stack: PHP 7+, MySQL, Tailwind CSS, JavaScript, WAMP Server

Datrax | Zero-Dependency Python Utility Library

- Engineered a lightweight, zero-dependency Python library implementing 30+ array and string manipulation utilities from scratch using core algorithms (Bubble Sort, Two-Pointer reversal, Linear Search).
- Bypassed built-in high-level functions (like sum(), sort(), upper()) to manually implement logic via ord()/chr() manipulation and iterative approaches, demonstrating strong foundational DSA knowledge.
- Developed comprehensive unit test suites using unittest to validate edge cases (empty inputs, boundary conditions, large array rotations), ensuring 100% module reliability.
- Structured the project for PyPI distribution using setuptools, enabling seamless installation and version management for lightweight Python environments.

Tech Stack: Python, Unit Testing (unittest), PyPI Packaging (setuptools)
